Hoa Hai, Ngu Hanh Son, Da Nang

Portfolio : [thanhbui27](#)

SKILLS

Game Development:

- Unity, C#
- Gameplay Programming
- Physics, UI, Animation, Object Pooling, DOTween
- Cocos Engine 3D
- ADS Medition

Programming Languages: C#, JavaScript, TypeScript, Java

Soft Skills: Problem-solving, Teamwork, Communication

AI Tools:

ChatGPT, Claude, GitHub Copilot, Cursor AI, Prompt Engineering, AI-assisted Development

ADDITIONAL SKILLS

Backend & API: Java Spring Boot, Node.js, .NET, RESTful APIs, Swagger, JWT, OAuth2

Database: MySQL, PostgreSQL

Tools: Git, GitHub, Photoshop, Illustrator, Figma

EDUCATION

VIET NAM - KOREA University of Information Technology and Communication

2020 - 2025

GPA : 3.46

PROFILE

I am a dedicated **Unity Game Developer** with a strong foundation in **C#, Unity, gameplay programming, game physics, UI, and animation systems**. I am passionate about solving technical problems, building polished gameplay experiences, and continuously improving my skills. I am currently seeking a **Unity Developer** position where I can contribute to game projects and grow within a collaborative team.

EXPERIENCE

Unity Developer

03/2025 - now

- Developed and maintained **Unity-based mobile applications** and game features using **C#**.
- Implemented and optimized **UI systems**, including dynamic layouts and responsive elements.
- Integrated third-party SDKs, including **Agora** for livestream/video calls, **Firebase** for push notifications, and **Tapjoy/LevelPlay** for **ads and monetization**.
- Debugged and resolved runtime issues such as **NullReferenceException, coroutine/async bugs, and platform-specific problems**.
- Improved application performance by optimizing **UI rendering, asset usage, and runtime logic**.
- Worked with backend APIs to handle data synchronization and application state updates.
- Utilized **AI-assisted development** tools such as ChatGPT, GitHub Copilot, and Claude to support debugging, refactoring, documentation, and feature implementation.

Freelance FullStack Developer

12/2023 - 03/2025

- Worked independently on **Frontend** and **Backend** projects, providing web development solutions for clients.
- Utilized technologies such as React, Typescript, and Node.js to build and deploy applications.
- Continuously learned and adapted to new programming languages and technologies to enhance development skills.

Frontend Developer - Pureative Company

Pureative Company

9/2022 - 7/2023

- Frontend Training (HTML, CSS, JS, TS, React).
- Developed and **optimized UI components** using **React, TypeScript, and Ant Design**.
- Integrated **REST APIs** into the **frontend**, improving data visualization and interactivity.
- Worked with designers in Figma to ensure responsive and user-friendly UI/UX.
- Optimized frontend performance**, reducing loading time by 40% using lazy loading and code splitting.

PROJECTS

[View more in Portfolio](#)

1 - Bounty Hunter

(Published on Mobile Store)

App Storte : [Link](#)

Google Play : [Link](#)

- Developed and maintained game features using **Unity (C#)**
- Built and improved UI systems, including **dynamic layouts, message display, and responsive elements**
- Worked with **Unity VideoPlayer** to implement video playback features:
 - Handled **video display** and basic **audio synchronization**
 - Fixed issues related to **video formats** and **playback errors**
 - Applied **asynchronous loading** to reduce UI blocking
- Integrated and worked with **backend services**:
 - Consumed **REST APIs** for data retrieval and updates
 - Worked with **socket-based communication** for real-time features (basic level)
- Integrated third-party services:
 - **Tapjoy (ads/offerwall)** and handled basic error cases
 - **Firebase Cloud Messaging (FCM)** for push notifications
 - **Agora** for livestream/video call features.
- Supported user-related logic such as guest mode and basic session handling
- Improved **performance** and **stability**:
 - Optimized **UI layout** and **UI rendering**
 - Debugged common runtime issues (**NullReferenceException, coroutine/async issues**)
 - Fixed bugs related to **UI, video playback, and SDK integratio**

2 - Metahourse

(Published on Mobile Store)

App Storte : [Link](#)

Google Play : [Link](#)

- Maintained and updated existing **Unity project features**.
- Implemented and adjusted **UI elements** based on design requirements.
- Worked with an existing codebase to **refactor code** and improve **code readability**.
- Supported integration with **backend APIs** for updating and displaying data.
- Collaborated with team members to ensure **stable builds** and smooth **feature updates**.

3 - Legacy Runner Game

(Published on Mobile Store)

Google Play : [Link](#)

- Developed a **legacy-style runner game** using **Unity (C#)**, where the character runs automatically on a straight path and collects items to gain power.
- Implemented core gameplay mechanics, including **item collection, vertical movement, power progression**, and end-game combat flow.
- Built an end-stage sequence where the player flies forward, destroys multiple walls, and continues to a **boss fight** after clearing all obstacles.
- Designed basic **collision detection, trigger events**, and gameplay state transitions between running, flying, wall-breaking, and boss battle phases.
- Implemented simple **UI feedback** for player progress, collected items, and game state changes.
- **Optimized gameplay** logic to ensure smooth movement, stable interactions, and consistent game flow.

4 - Room No.7

Demo Video Game : [Link](#)

- Developed a **3D horror puzzle game** using **Unity (C#)**, set in a mysterious room environment.
- Implemented core gameplay systems, including **puzzle mechanics, item interaction, inventory system, and story progression**.
- Built and improved **UI systems**, such as **Inventory UI**, item interaction prompts, and basic HUD elements.
- Designed horror atmosphere through **lighting setup**, including **Point Light, Spot Light, Directional Light, shadows, and environment settings**.
- Implemented **scripted events, simple cutscenes, jump scare triggers**, and camera/event control to support storytelling.
- Managed **3D scene setup**, object placement, scene hierarchy, trigger-based events, scene transitions, and player progression.
- Debugged gameplay and UI issues to improve overall **stability** and player experience.
-
