

Bui Ngoc Thanh

UNITY DEVELOPER

✉ bnthanh.it@gmail.com 📞 0393256471 📍 Da Nang

Junior Unity Developer with around 1 year of hands-on experience in building and maintaining mobile games and real-time applications. Experienced in working with Unity (C#), UI systems, and third-party SDK integrations such as livestreaming and ads. Strong problem-solving skills with a focus on debugging, performance optimization, and writing clean, maintainable code.

SKILLS

- Unity Developer
- Unity Engine
- C# Programming
- 2D/3D Game Development
- UI/UX Design
- Debugging & Troubleshooting
- Cocos Engine
- Physic/Raycast
- ADS Medition
- Blender

EXPERIENCE

Unity Developer

BAP Mar 2025 - Present

- Developed and maintained Unity-based mobile applications and game features using C#
- Implemented and optimized UI systems, including dynamic layouts and responsive elements
- Integrated third-party SDKs:
 - Livestream/video call using Agora
 - Push notifications using Firebase
 - Ads/monetization using Tapjoy
 - Ads using LevelPlay
- Debugged and resolved runtime issues such as NullReferenceException, async/coroutine bugs, and platform-specific problems
- Improved application performance by optimizing UI rendering, asset usage, and runtime logic
- Collaborated with backend systems to handle API data and synchronize application state

PROJECTS

Bounty Hunter

DEV Aug 2025

(Published on Mobile Store)

- Developed and maintained game features using Unity (C#)
- Built and improved UI systems, including dynamic layouts, message display, and responsive elements
- Worked with Unity VideoPlayer to implement video playback features:
 - Handled video display and basic audio synchronization
 - Fixed issues related to video formats and playback errors
 - Applied asynchronous loading to reduce UI blocking
- Integrated and worked with backend services:
 - Consumed REST APIs for data retrieval and updates
 - Worked with socket-based communication for real-time features (basic level)
- Integrated third-party services:
 - Tapjoy (ads/offerwall) and handled basic error cases
 - Firebase Cloud Messaging (FCM) for push notifications
- Supported user-related logic such as guest mode and basic session handling
- Improved performance and stability:

- Optimized UI layout and rendering
- Debugged common runtime issues (NullReferenceException, coroutine/async issues)
- Fixed bugs related to UI, video playback, and SDK integration

Metahourse

DEV

- Maintained and updated existing Unity project features
- Implemented and adjusted UI elements based on design requirements
- Fixed UI-related issues and improved layout consistency across screens
- Worked with existing codebase to refactor and improve code readability (basic level)
- Supported integration with backend APIs for updating and displaying data
- Collaborated with team members to ensure stable builds and feature updates

Room No.7

(Personal Project – Unity)

Link Video : [Drive](#)

- Developed a 3D horror puzzle game set in a mysterious room environment using Unity (C#)
- Implemented core gameplay systems:
 - Basic puzzle and interaction mechanics
 - Inventory system for collecting and using items
 - Story progression through in-game events and interactions
- Built and improved UI systems:
 - Inventory UI and item interaction
 - In-game prompts and basic HUD elements
- Designed and set up lighting and environment to enhance atmosphere:
 - Used different types of lights (Point, Spot, Directional)
 - Adjusted lighting, shadows, and environment settings to create a horror mood
 - Designed scene layout and object placement for better player experience
- Implemented simple cutscenes and scripted events:
 - Used triggers and timeline-based logic to control camera and events
 - Supported storytelling and guided player progression
- Implemented jump scare events using triggers and timing logic
- Worked with 3D assets and scene setup:
 - Placed and configured objects in the environment
 - Managed scene hierarchy and object organization
- Handled basic game flow:
 - Scene transitions and player progression
 - Trigger-based events for gameplay and story
- Debugged gameplay and UI issues, improving overall stability

2D RPG Top-Down Game

DEV May 2023

(Personal Project – Unity)

[Play on Itch.io](#)

- Developed a 2D top-down RPG game using Unity (C#) with basic gameplay mechanics
- Implemented core gameplay systems:
 - Player movement and control (top-down perspective)
 - Item system (collecting and managing in-game items)
 - Level system with multiple maps and scene transitions
- Built basic combat and interaction mechanics
- Designed and implemented UI elements such as HUD, inventory display, and in-game feedback
- Managed game flow including scene management, game states, and player progression
- Worked with Unity tools:
 - Prefabs and ScriptableObjects
 - Animator for character animation
 - Tilemap system for level design
- Debugged gameplay issues and improved overall stability during development

EDUCATION

vietnam - korea university of information and communication technology *Sep 2020 - Sep 2025*
GPA : 3.4

LANGUAGES

English (Basic)
